Purchases	\$3,997,109	While some cash the cash was used for operational needs this quarter, the remaining proceeds were invested in conjunction with our 2-3 year laddered strategy for the portfolio. Overall, given the short nature of the portfolio Fed rate hikes have been helpful in improving the book yield. Reinvestments of proceeds were executed at 65 basis points higher than maturing bonds. As a result, overall portfolio book yield improved 6 basis points to 1.08%.	1.46%

Economic Outlook

Treasury Yield Curves

Federal Reserve's Balance Sheet

- Bond yields continued to grind tighter during the second quarter, as the market questioned the newly elected administrations ability to boost growth quickly through spending and deficits
 - Slowed by the political process, infighting and controversy, there is growing concern that little to no new policies will be put into effect this year
 - The inability to execute large scale changes has eased post-election inflationary fears, bringing buyers back into the bond market
- Over the quarter, the Treasury yield curve flattened as yields inside 3 years rose on anticipation of increased Fed activity, while yields greater than 5 years declined on reduced long-term inflation concerns
 - 10 year Treasury bond yield fell 9 basis points moving from 2.39% to 2.30%
- Since the election, the Federal Reserve has remained hawkish even in the face of softening inflation
 - Fed raised rates twice this year and signaled their intention for a third hike in 2017
- With rate increases underway, the Fed also presented a plan at the June meeting to begin reducing their balance sheet holdings of Treasuries and agency mortgage-backed securities
 - Markets anticipates this plan to be initiated before year-end

Economic Outlook

Inflation

Employment

Inflation

- Inflation reports for both the U.S. and Eurozone reflected the difficulty each Central Bank is having in achieving their inflation targets of 2%
- Current U.S. Core PCE is 1.4%, year over year, a low not experienced since December 2015
 - Core CPI inflation released earlier in the month was 1.7% reflecting the same downward trend
 - Eurozone core inflation has also remained well below targets at 1.1%
- While the Fed remains hawkish discounting slowdown as transitory, Eurozone economic numbers have eased recent pressures on the ECB to end its stimulus program
- Fed officials believe a slowdown in inflation in Q2 should prove transitory, however softening inflation numbers could raise concern over the pace of hikes in coming months

Employment

- Monthly job growth continues to be positive with the unemployment rate at 4.4%
 - With wage inflation relatively contained, the Fed has flexibility in deciding course of action and pace of rate hikes

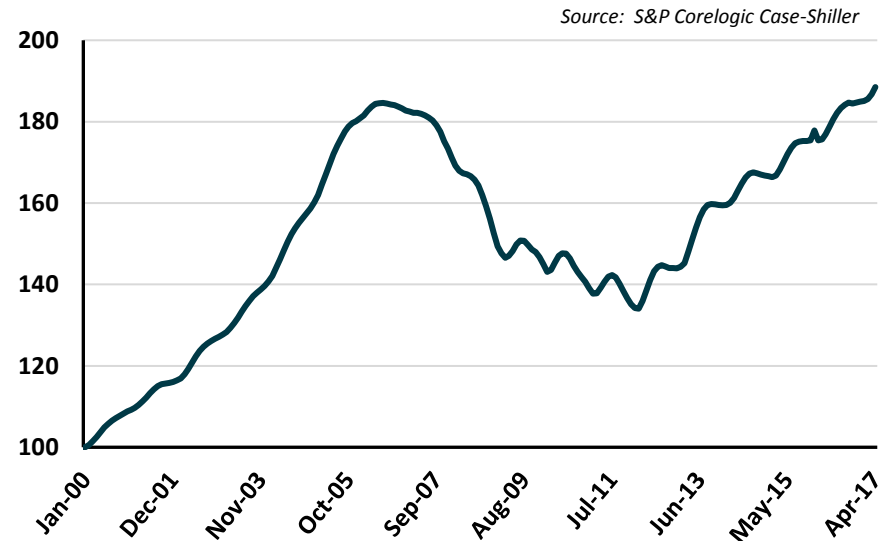

Economic Outlook

Equity and Housing Markets

S&P 500 Index

National Home Price Index

Equities

- Equity markets continued to reach new highs as the expectation of corporate tax rate change and reduced regulation remains in play
- Both the S&P and Dow have gained over 8% this year, led by the technology sector which has increased over 16%

Housing

- U.S. housing market continues to benefit from the low interest environment
 - As of April, eight major cities are now trading above peaks reached back in 2006-2007, including: San Francisco, Seattle, Portland, Boston, Denver, Dallas, Charlotte and Atlanta
 - Four cities that led the nation in pricing in 2006 (Los Angeles, Miami, Washington, and San Diego) have rebounded, but not back to previous peaks
- Longer term, cities such as Cleveland and Detroit have experience less than 15% growth in home prices since tracking began in January 2000

Economic Outlook

Corporates

Corporate spreads rallied nine basis points on the quarter as the markets grew more comfortable buying bonds with the lack of policy changes implemented by the U.S. Government. The rally occurred despite an onslaught of supply marked by the third highest month of new issuance in May. Strong demand for investment grade corporate bonds continued to absorb supply which pushed credit spreads to new cycle lows ending the quarter at +109bps.

The 9bps of corporate spread tightening was distributed fairly even among sectors and ratings, except for utilities and AA-rated bonds which tightened only 6bps and 5bps, respectively. Financials and BBBs tightened the most as all of the large U.S. financials passed their annual stress tests. The spread between lower rated BBBs and higher rated A to AAA bonds tightened in the past year so we believe that investors are not being paid to take the additional risk involved with low BBB-rated bonds.

Spreads are edging closer to the 10 year tight levels, increasing the probability of widening from here. Potential widening is supported by expectations for tighter monetary policy via higher rates and reversal of quantitative easing. Given the risk of a corporate sell-off, we continue

with our “up in credit quality” stance. Given BBBs make up the largest percentage (49%) of the investment grade index, we will invest in higher quality BBB names, specifically those with more stable cash flows. Success will depend on specific names owned versus those not owned as leveraging events continue for share buybacks or mergers and acquisitions for individual names within various sectors.

Mortgage and Asset Backed Securities (MBS and ABS)

Mortgage performance was fairly range bound for the quarter, modestly underperforming Treasuries. GNMA MBS was the primary driver of the underperformance due to decreased foreign sponsorship as the spreads between domestic and global rates tightened and hedging costs increased.

One of the most widely telegraphed headline events affecting the mortgage market over the second quarter was enhanced clarity on tapering of the Federal Reserve’s MBS reinvestment program. The Fed intends to reduce paydown reinvestments by a maximum of \$4bn per month, which will subsequently increase by \$4bn every quarter until it reaches \$20bn. While the timing remains unknown, forecasts are clustered between 4Q17 to 1Q18.

Supply of agency MBS steadily rose over the second quarter to \$300bn gross and \$33bn net, bringing YTD totals to \$622bn and \$132bn, respectively. Supply was met by bank demand which increased \$10bn from Q1. Additionally, money managers continued to add with increased inflows while foreign buyers were net purchases for the first time this year.

Prime has maintained a modest underweight as we see the potential for spread widening once the Fed’s sponsorship declines and increased net

Economic Outlook

supply will need to be absorbed. Our focus in residential mortgages remains in agency-backed products only.

Shorter duration securitized products have been well bid over the last 18mo as the market sees value in limiting their duration bets. We don't see this dynamic shifting and as such find value in the 2-3yr AAA Credit Card ABS space which is exhibiting historically high fundamental metrics. Similarly, we see opportunity in the lower coupon 10yr MBS space which has much lower prepay risk to longer maturity pools. Both Credit Card ABS and 10yr MBS pools provide attractive yields and spreads relative to Agency Debentures and Treasuries.

Municipals

Tax-exempt municipals continued to outperform into the second quarter of 2017. According to Bloomberg Barclays Index Data, the Municipal Bond Index has returned 1.96% over the quarter, providing an excess return of 1.11% over Treasuries. Primary market supply remained muted during the quarter helping drive performance. Net inflows into municipal bond funds this year of roughly \$5.8 billion also contributed to positive performance. Year-to-date, tax-exempts have returned 3.57%.

The Federal Reserve raising the Fed Funds Target rate in early June pressured short-term interest rates, including tax-exempt municipal yields. According to Municipal Market Data, 2-year, AAA pre-tax yields rose 3 basis points finishing the quarter at 1.06%. At the same time, 5-year, AAA yields fell 21 basis points finishing the quarter 1.35%, with both 10- and 30-year yields falling 24 basis points to finish the quarter at 1.99% and 2.79%, respectively.

As we head into the third quarter, Prime remains somewhat cautious on the municipal sector as pre-tax municipal yields as a percentage of Treasury yields are on the tight side of fair value.

Glossary of Terms

Security Types	
Adjustable Rate Mortgage (ARM)	A mortgage in which the interest rate is changed at regular intervals to reflect fluctuations in market interest rates. Because the borrower takes some of the risk of rising interest rates, the initial rate may be lower than that on a fixed-rate mortgage. There are often limitations on the interest rate change from one period to the next, with a rate cap for the life of the loan.
Agency	A fixed income security issued by a government-sponsored agency, such as Ginnie Mae, Freddie Mac, or the Tennessee Valley Authority. Depending on the issuer, these bonds may or may not be backed by the full faith and credit of the U.S. government.
Asset-Backed Security (ABS)	A fixed income security backed by the cash flows from loans or leases. Auto loans, home equity loans, and credit card receivables are the most common assets backing these securities. Principal and interest payments made by borrowers are redirected to owners of ABS to meet the scheduled coupon and principal payments.
Collateralized Mortgage Obligation (CMO)	A security similar to a mortgage-pass through. In a CMO, the principal and interest received from borrowers is split into different classes called tranches. The structure of CMO payment tranches makes the timing of cash flows more certain for owners of some tranches and less certain for owners of other tranches. More uncertain tranches typically provide higher yields.
Commercial Mortgage-Backed Security (CMBS)	A fixed income security backed by the cash flows from commercial real estate mortgages. All principal and interest from the mortgages flow to bond holders in a defined sequence. Common types of real estate involved are apartment buildings, office and retail space, hotels, and health care facilities.
Corporate (Corp)	A fixed income security issued by a private corporation.
Mortgage Pass-Through (MPT)	A fixed income security backed by the cash flows from residential mortgages. Monthly principal and interest payments made by borrowers are redirected to owners of MPTs as they are received. Because borrowers may prepay their mortgages (perhaps due to refinancing or selling the house), the timing of cash flows on these securities is uncertain.
Preferred Stock (Preferred)	Capital stock having priority over a corporation's common stock in the distribution of dividends. In the event of a liquidation, preferred stock's claim on assets ranks above that of common stock but below that of bank loans or corporate bonds.
Tax-exempt Municipal (ExMuni)	A fixed income security, issued by a state or municipality, paying interest that is exempt from federal income tax. Interest may or may not be exempt from state and local tax.
Taxable Municipal (TaxMuni)	A fixed income security, issued by a state or municipality, paying interest that is subject to federal income tax. Typically issued much less commonly than tax-exempt municipals.
Treasury	A marketable fixed income security issued by the U.S. Department of the Treasury and backed by the full faith and credit of the U.S. government.

Glossary of Terms

Definitions	
Average Life	The dollar-weighted average time to maturity of a stream of principal cash flows. Also referred to as “weighted average life” or “WAL”.
Basis Point (bp)	1/100 of 1% (or equivalently .0001).
Benchmark	<p>An index against which performance can be measured. Attributes of a good benchmark include:</p> <p><i>Objective:</i> The index should be identified ahead of the time, it should be easily understood, and the construction rules should be clearly defined.</p> <p><i>Replicable:</i> The manager should be able to replicate the returns passively.</p> <p><i>Relevant:</i> The index should represent the manager’s neutral position. In other words, without the manager’s input, the index should represent a reasonable portfolio the company would purchase.</p> <p><i>Tax Adjusted:</i> The benchmark should adjust for the different tax rates on various security types</p>
Book Income	Dollars of investment income that flow through an insurance company’s income statement. This is equal to coupon received plus any accretion/ (amortization) of book value. It can also include any <u>realized</u> gains or losses in the portfolio.
Book Value	The value of a security that is reflected on an insurance company’s balance sheet. For fixed income securities on a statutory and tax basis this is the amortized value. The amortized value periodically writes up any accrual of purchase discount (or writes down amortization of premium) over the life of the security. The amortized value holds the underlying “book yield” constant and therefore does not swing with movements in the market.
Book Yield	The average annual yield which a bond purchased and held to maturity will earn over the period it is owned. This is generally fixed at the time of purchase of the security. The book yield can be used to calculate the book value of the security at any time between purchase and maturity.
Cash Flow	Interest and principal payments from the securities in a fixed income portfolio. A bullet (non-callable) bond will typically pay a coupon payment every 6 months, with a return of principal at maturity. For mortgage-backed securities and asset-backed securities, cash flows generally arrive monthly from both interest and principal. This principal portion contains both the planned return of principal and prepayment of principal due to reasons such as mortgage refinancing.
Convexity	Describes the sensitivity of a bond’s duration to a change in yield. As yields decrease, duration increases on bonds with positive convexity and decreases on bonds with negative convexity. This causes bonds with negative convexity to underperform when yields increase or decrease by large amounts.
Credit Risk	The risk that the issuer of a fixed income security may default and be unable to make timely interest and principal payments on the security.
Duration	The sensitivity of a bond’s price to a change in yield. Duration generally increases for bonds with longer maturities, meaning these bonds are more sensitive to yield changes. Bond price and yield move in opposite directions. Example: A bond with a duration of 5.0 would experience a price decrease of 5% for every 1% (100 bps) increase in interest rates.

Glossary of Terms

Definitions (cont.)	
DYCARRSM	A proprietary model designed specifically for P/C insurance companies to maximize investment income while managing interest rate risk (see definition.) The model applies stress tests to projected operational cash flow and finds the likelihood that bonds in the portfolio will need to be liquidated in order to meet cash flow needs (such as the payment of losses). This may allow a company to invest in longer duration securities with higher yields.
FICO Score	A generic credit score developed by Fair, Isaac and Company, Inc., designed to predict the likelihood of borrowers becoming delinquent in their credit obligations.
Gross Domestic Product (GDP)	The total market value of all final goods and services produced in a country in a given year; it is equal to total consumer, investment, and government spending, plus exports, minus imports.
Interest Rate Risk	The risk to a bondholder that an increase in interest rates will cause bond prices to fall. Interest rates and market prices for fixed income securities generally move in opposite directions. Interest rate changes are the largest cause of changes in the market value of a bond portfolio.
Loan to Value (LTV)	A lending risk assessment ratio used in mortgage lending. LTV is calculated by dividing the mortgage amount by the lesser of appraised value or selling price. Residential mortgage loans conforming to agency guidelines have LTV ratios of 80% or lower at origination. Lenders will frequently require lower LTV ratios for commercial or investment properties.
Market Value	Estimated value of the bond based on current market price. This value fluctuates continually with interest rates and perceived risk of the issuer. Reflects the amount that could be received by selling the bond.
Option Adjusted Spread (OAS)	The portion of a bond's yield which is attributable to the credit risk of a bond as perceived by the market. This allows for comparison between bonds with or without embedded options such as calls, puts, and prepayment features.
Realized Gain/(Loss)	Difference between market and book value when a bond is sold. If market is greater than book value the bond was sold at a realized capital gain. Realized capital gains/(losses) flow through an insurer's income statement.
Tax Equivalent Yield	Yield adjusted for taxes, which allows for comparison of taxable bonds to tax-exempt bonds. Calculated by dividing after-tax yield by 0.65 (1 minus 35%).
Total Return	The return on a security or portfolio that reflects both income and price change. Assumes that the security or portfolio is priced using fair value at the end of the evaluation period.
Unrealized Gain/(Loss)	The difference between market value and book value on a bond. If market value is greater than book value the bond is at an unrealized gain. Under statutory accounting rules, changes in unrealized gain/(loss) do not affect income.
Volatility Adjusted Duration	A portfolio duration which has been adjusted for the lower observed price volatility seen in tax-exempt municipal bonds. Historically municipals appear to have about 15% lower price volatility than their stated durations suggest; this measure takes that observance into account.
Whole Loan	An original residential mortgage loan; distinct from a pooled pass-through which contains multiple loans. Non-agency CMOs use whole loans as collateral. They usually include jumbo mortgages and other mortgages which do not conform to the standards required for securitization by the agencies (GNMA, FNMA, FHLMC).
Yield	The implied return achievable for purchasing a bond at a given price.
