Executive Summary

TRANSACTIONS:			
Action	Total	Comments	Average Tax- Equivalent Yield
Sales, Calls, and Maturities	\$5,300,524	A majority of the proceeds generated this quarter were executed by request to provide funding for operational purposes. These requests occurred early August and late September.	1.06%
Purchases	\$5,893,295	Early in the quarter, maturity proceeds along with positive operational cash added to the portfolio were deployed in conjunction with our 2-3 year laddered strategy for the portfolio. Overall, given the short nature of the portfolio, Fed rate hikes have been helpful in improving the portfolio book yield. Reinvestments of proceeds were executed at 163 basis points higher than maturing bonds. As a result, overall portfolio book yield improved 19 basis points to 1.80%.	2.69%

PORTFOLIO STATISTICS:

Economic Outlook

Treasury Yield Curves

Treasury Yields

- Overall yields are higher YTD due to improved growth expectations due to favorable tax policy changes, higher deficit spending, strong employment growth and active Fed tightening
 - o 10-year Treasuries closed the third quarter at 3.06%, brought on by an increased wage inflation print in the August employment data
 - While growth expectations have increased this year, geopolitical volatility and tariffs remain an ongoing concern for the markets
 - With little to no progress on trade negotiations with China, there is growing concern this will be a headwind in 2019
 - Yield curve continues to remain flat as investors are not being compensated for taking term risk in the market
- Federal Reserve has been active in 2018, this is expected to continue into 2019
 - Fed officials have cited improved economic conditions that support gradual increases of the Fed Funds rate
 - Tapering of reinvestments in the quantitative easing program has also continued as the market has easily digested supply
 - In 2019, press conferences will be held after each FOMC meeting, indicating every meeting will be open to possible rate action

Flattening Yield Curve and World Bond Yields

Flattening Yield Curve

World Bond Yields

10 Year World Bond Yields										
	12/31/2017	9/30/2018	Difference

Spain	1.56%	1.50%	(0.06%)							
Japan	0.04%	0.12%	0.08%							

Source: Federal Reserve, Bloomberg

Flattening Yield Curve and World Bond Yields

- With rising short-term yields, the yield curve has flattened to the tightest levels since 2007
 - o 2 to 10-year Treasury yield spreads are 24 basis points(bps) down from 52 bps at the start of the year
 - o 10 to 30-year Treasury yield spreads are 14 bps, down from 35 bps at the start of the year
 - Curve flattening is a market response to the Fed's hawkish stance, driving short rates higher while simultaneously reducing long-term inflation concerns
- European Central Bank announced in June they would wind down their quantitative easing purchase program by year-end
 - o Their intent is to reinvest maturing debt for an extended period and have explicitly stated they would not raise interest rates before summer of 2019
- Bond yields in the UK are higher after the Bank of England hiked rates by 25bps in early August
- Italian yields are also higher, reflecting increased concerns about the economic plans of the Eurosceptic coalition between the 5 Star Movement and the Northern League

Economic Outlook

Inflation

Equity Markets

Inflation, Employment & Equity Markets

- U.S. economy continues to experience healthy corporate earnings, strong employment and controlled inflation
 - While inflation levels have been below "target" for many years, the Fed's inflation gauge, Core PCE, has finally reached the target of 2%
 - o Fed's inflation target is "symmetric", indicating they will allow inflation to run modestly above target
 - The employment landscape remains strong with the unemployment rate dropping to 3.7%
 - o With the unemployment rate establishing cyclical lows, the markets focus on the wage component at each release
 - Higher wages are a potential catalyst to increased inflation pressure which could drive additional Fed action
 - The market is seeing evidence of increased wage inflation, YTD wage inflation has averaged 2.7% (year over year) compared to 2.5% in 2017
 - Equity markets remain confident in the strength of the economy
 - o Recent favorable tax law changes have created a friendly business environment for US corporations
 - Repatriation of foreign profits at lower tax rates has allowed US companies to increase capital investment and pay dividends
 - As a result, both the S&P and Dow Jones Industrial average have reached all-time highs this year

Tariffs and Treasury Debt Holders

Tariffs and Treasury Debt

- US economy has exhibited strong results and is entering the tenth year of expansion
 - o Recent tariffs and geopolitical issues, however, continue to be headwinds that could threaten global growth
- Markets remain concerned over the negative repercussions of U.S. tariff policy that could lead to lower growth and higher inflation
 - o At the end of Q3, the US has levied \$250 billion in tariffs against China and threatened additional increases in coming months
- While the trade imbalance limits China's ability to retaliate with dollar for dollar response, China could consider implementing "qualitative" measures, such as reducing US Treasury holdings, devaluing the Yuan and increasing pressures on US businesses operating in China
 - o Foreign holders of U.S. Treasuries stand at \$6.25 trillion, with China and Japan holding over \$1 trillion each
- Without resolution in trade negotiations, Trump's tariff approach may threaten our ability to rely on foreign purchases to help finance our debt
- Excess supply could pressure rates higher

Economic Outlook

Municipals

Comments

- Municipal yields followed rates higher in the 3rd quarter, underperforming treasuries in shorter maturity tenors.
- Treasury ratios improved over the quarter across most tenors but remain at or slightly through fair value
- Given the relative flatness of the back end of the municipal yield curve, investors can capture 93% of the available yield by staying inside 20 years.
- Prime continues to direct institutional cash in crossover accounts to other asset classes that offer better relative value
- Lack of primary market supply continues to be the main driver for municipal performance this year, as tax reform has greatly reduced the number of refinancing deals brought to market
- New issue supply is down roughly 15% YOY despite new money financings showing an increase over 2017

Economic Outlook

Corporates

Comments

- Spread compression was the dominant theme of the third quarter with bond indices reversing some of the weakness seen during the first half of 2018
- Spreads are at the mid-point for the year after touching a low of 81bps in Q1 before widening to 117bps at the end of Q2
- BBBs have increased 155% since March 2009 and now represent ~50% of the Investment Grade market, or 12% of US nominal GDP
- This growth is the result of corporations levering up given abnormally low borrowing rates and healthy investor demand
- Proceeds have funded M&A to help expand growth operations
- Corporate earnings have been robust, and cash flow generation continues to benefit from the Tax Cuts and Jobs Act of 2017
- We retain our tactical overweight to corporates, but with a high quality bias which underscores the importance of credit selection and fundamental credit analysis.

Mortgage and Asset Backed Securities (MBS and ABS)

Existing Home Sales vs. Affordability

Cumulative YTD ABS Supply

Federal Reserve

- While the level of the Fed's paydown reinvestments has so far remained above the capped level of payments it has targeted for runoff this year (Cap), it is projected that the Fed's net reinvestments will reach zero by October
- Tapering has contributed to MBS spreads widening 4bps YTD and will likely lead to further spread volatility in the absence of the Federal Reserve's net support of the sector

Housing

- As the economy has improved, interest rates have risen, and home prices have recovered. This has unfortunately resulted in declining housing affordability and a slower pace of home sales
- Affordability has weakened, with home price appreciation averaging
 4.22% and median household income growth only averaging 2.65%
- Mortgage rates have increased from the post-recession lows of 3.47% to 4.84%

ABS

- The ABS market has seen a shift in the level of issuance between credit card and auto loan issuance this year
- Credit card issuance has totaled \$29B YTD, a 12% YOY decline, while auto issuance has totaled \$76B or a 16% increase

Glossary of Terms

Adjustable Rate Mortgage (ARM)	A mortgage in which the interest rate is changed at regular intervals to reflect fluctuations in market interest rates. Because the borrower takes some of the risk of rising interest rates, the initial rate may be lower than that on a fixed-rate mortgage. There are often limitations on the interest rate change from one period to the next, with a rate cap for the loan.
Agency	A fixed income security issued by a government-sponsored agency, such as Ginnie Mae, Freddie Mac, or the Tennessee Valley Authority. Depending on the issuer, these bonds may or may not be backed by the full faith and credit of the U.S. government.
Asset-Backed Security (ABS)	A fixed income security backed by the cash flows from loans or leases. Auto loans, home equity loans, and credit card receivables are the most common assets backing these securities. Principal and interest payments made by borrowers are redirected to owners of ABS to meet the scheduled coupon and principal payments.
Collateralized Mortgage Obligation (CMO)	A security similar to a mortgage-pass through. In a CMO, the principal and interest received from borrowers is split into different classes called tranches. The structure of CMO payment tranches makes the timing of cash flows more certain for owners of some tranches and less certain for owners of other tranches. More uncertain tranches typically provide higher yields.
Commercial Mortgage- Backed Security (CMBS)	A fixed income security backed by the cash flows from commercial real estate mortgages. All principal and interest from the mortgages flow to bond holders in a defined sequence. Common types of real estate involved are apartment buildings, office and retail space, hotels, and health care facilities
Corporate (Corp)	A fixed income security issued by a private corporation.
Mortgage Pass-Through (MPT)	A fixed income security backed by the cash flows from residential mortgages. Monthly principal and interest payments made by borrowers are redirected to owners of MPTs as they are received. Because borrowers may prepay their mortgages (perhaps due to refinancing or selling the house), the timing of cash flows on these securities is uncertain.
Preferred Stock (Preferred)	Capital stock having priority over a corporation's common stock in the distribution of dividends. In the event of a liquidation, preferred stock's claim on assets ranks above that of common stock but below that of bank loans or corporate bonds.
Tax-exempt Municipal (ExMuni)	A fixed income security, issued by a state or municipality, paying interest that is exempt from federal income tax. Interest may or may not be exempt from state and local tax.
Taxable Municipal (TaxMuni)	A fixed income security, issued by a state or municipality, paying interest that is subject to federal income tax. Typically issued much less commonly than tax-exempt municipals.
Treasury	A marketable fixed income security issued by the U.S. Department of the Treasury and backed by the full faith and credit of the U.S. government.

Glossary of Terms

Average Life	The dollar-weighted average time to maturity of a stream of principal cash flows. Also referred to as "weighted average life" or "WAL".
Basis Point (bp)	1/100 of 1% (or equivalently .0001).
Benchmark	An index against which performance can be measured. Attributes of a good benchmark include:
	Objective: The index should be identified ahead of the time, it should be easily understood, and the construction rules should be clearly defined.
	Replicable: The manager should be able to replicate the returns passively.
	Relevant: The index should represent the manager's neutral position. In other words, without the manager's input, the index should represent a reasonable portfolio the company would purchase.
	Tax Adjusted: The benchmark should adjust for the different tax rates on various security types
Book Income	Dollars of investment income that flow through an insurance company's income statement. This is equal to coupon received plus any accretion/ (amortization) of book value. It can also include any <u>realized</u> gains or losses in the portfolio.
Book Value	The value of a security that is reflected on an insurance company's balance sheet. For fixed income securities on a statutory and tax basis this is the amortized value. The amortized value periodically writes up any accrual of purchase discount (or writes down amortization of premium) over the life of the security. The amortized value holds the underlying "book yield" constant and therefore does not swing with movements in the market.
Book Yield	The average annual yield which a bond purchased and held to maturity will earn over the period it is owned. This is generally fixed at the time of purchase of the security. The book yield can be used to calculate the book value of the security at any time between purchase and maturity.
Cash Flow	Interest and principal payments from the securities in a fixed income portfolio. A bullet (non-callable) bond will typically pay a coupon payment every 6 months, with a return of principal at maturity. For mortgage-backed securities and asset-backed securities, cash flows generally arrive monthly from both interest and principal. This principal portion contains both the planned return of principal and prepayment of principal due to reasons such as mortgage refinancing.
Convexity	Describes the sensitivity of a bond's duration to a change in yield. As yields decrease, duration increases on bonds with positive convexity and decrease on bonds with negative convexity. This causes bonds with negative convexity to underperform when yields increase or decrease by large amounts.
Credit Risk	The risk that the issuer of a fixed income security may default and be unable to make timely interest and principal payments on the security.
Duration	The sensitivity of a bond's price to a change in yield. Duration generally increases for bonds with longer maturities, meaning these bonds are more sensitive to yield changes. Bond price and yield move in opposite directions. Example: A bond with a duration of 5.0 would experience a price decrease of 5% for every 1% (100 bps) increase in interest rates.

Glossary of Terms

DYCARR SM	A proprietary model designed specifically for P/C insurance companies to maximize investment income while managing interest rate risk (see definition.) The model applies stress tests to projected operational cash flow and finds the likelihood that bonds in the portfolio will need to be liquidated in order to meet cash flow needs (such as the payment of losses). This may allow a company to invest in longer duration securities with higher yields.
FICO Score	A generic credit score developed by Fair, Isaac and Company, Inc., designed to predict the likelihood of borrowers becoming delinquent in their credit obligations.
Gross Domestic Product (GDP)	The total market value of all final goods and services produced in a country in a given year; it is equal to total consumer, investment, and government spending, plus exports, minus imports.
Interest Rate Risk	The risk to a bondholder that an increase in interest rates will cause bond prices to fall. Interest rates and market prices for fixed income securities generally move in opposite directions. Interest rate changes are the largest cause of changes in the market value of a bond portfolio.
Loan to Value (LTV)	A lending risk assessment ratio used in mortgage lending. LTV is calculated by dividing the mortgage amount by the lesser of appraised value or selling price. Residential mortgage loans conforming to agency guidelines have LTV ratios of 80% or lower at origination. Lenders will frequently require lower LTV ratios for commercial or investment properties.
Market Value	Estimated value of the bond based on current market price. This value fluctuates continually with interest rates and perceived risk of the issuer. Reflects the amount that could be received by selling the bond.
Option Adjusted Spread (OAS)	The portion of a bond's yield which is attributable to the credit risk of a bond as perceived by the market. This allows for comparison between bonds with or without embedded options such as calls, puts, and prepayment features.
Realized Gain/(Loss)	Difference between market and book value when a bond is sold. If market is greater than book value the bond was sold at a realized capital gain. Realized capital gains/(losses) flow through an insurer's income statement.
Tax Equivalent Yield	Yield adjusted for taxes, which allows for comparison of taxable bonds to tax-exempt bonds. Calculated by dividing after-tax yield by 0.65 (1 minus 35%)
Total Return	The return on a security or portfolio that reflects both income and price change. Assumes that the security or portfolio is priced using fair value at the enc of the evaluation period.
Unrealized Gain/(Loss)	The difference between market value and book value on a bond. If market value is greater than book value the bond is at an unrealized gain. Under statutory accounting rules, changes in unrealized gain/(loss) do not affect income.
Volatility Adjusted Duration	A portfolio duration which has been adjusted for the lower observed price volatility seen in tax-exempt municipal bonds. Historically municipals appear to have about 15% lower price volatility than their stated durations suggest; this measure takes that observance into account.
Whole Loan	An original residential mortgage loan; distinct from a pooled pass-through which contains multiple loans. Non-agency CMOs use whole loans as collateral. They usually include jumbo mortgages and other mortgages which do not conform to the standards required for securitization by the agencies (GNMA, FNMA, FHLMC).
Yield	The implied return achievable for purchasing a bond at a given price.
